Chapter 1 Standard Configuration

1. NLS-FR20 Series fixed mount barcode scanner

2. USB cable

3. Quick Start Guide

Chapter 2 Optional Configuration

1. RS-232 cable

2. 5V power adapter

You should retain proof of purchase and ask your dealer for a warranty card.

Note: You should check to make sure that everything on the standard configuration list is present and intact after opening the package. If any contents are damaged or missing, please keep the original package and contact your dealer immediately for after-sale service.

Chapter 3 Safety Information

Precautions

■ Disassembly and retrofit

- Do not disassemble or retrofit the device yourself. Artificial damages caused by failure to observe this precaution are not covered by the warranty.

■ External power supply

- Use only the supplied power adapter. Otherwise there is a risk of damage to the scanner.

■ Abnormal situation

- Keep the scanner away from fire or heat sources. If there is unusual odor, overheating or smoke, immediately cut off the power and disconnect the power adapter, and contact your dealer or Newland customer service center. Continued use in this case may result in fire or electric shock.

■ Drop damage

- If the scanner is damaged due to a drop from high place, immediately cut off the power and contact your dealer or Newland customer service center.

■ Mounting location

- Do not place the scanner on unstable or uneven surfaces.
- Do not expose the scanner to humidity, dust or direct sunlight.

Maintenance

- The scan window should be kept clean using soft cloth or lens cleaning tissue. Do not use detergent to clean it.

- Do not scratch the scan window.

- Sudden temperature drops may cause condensation on the shell which could degrade the performance of the device. If condensation occurs, dry the device before use.

Chapter 4 Product Features

Designed primarily for such applications as electronic tickets/coupons, mobile marketing and office automation, the NLS-FR20 series fixed mount barcode scanner is able to read barcodes from paper and mobile phones.

It boasts the following features:

1. Digital barcode data capture

Capable of reading 1D and 2D barcodes off mobile phones.

2. Printed barcode data capture

Capable of reading 1D and 2D barcodes printed on paper.

3. Swift scanning

Delivers effortless, snappy and accurate reading of barcodes on various mobile phone LCD screens with different contrast ratios, colors and reflectances.

4. Easy to use

Simple configuration by scanning the programming barcodes provided in the user guide.

Chapter 5 Technical Specifications

Processor	IOTC 0370 CHIP
Interface	RS-232 (9.6~115.2Kbps)
	USB 1.1 (HID-KBW, HID-POS)
Image Sensor	640x480 CMOS
Symbologies	2D: PDF417, Data Matrix, QR Code 1D: EAN-13, EAN-8, UPC-A, UPC-E, ISSN, ISBN, Codabar, Code 128, Code 93, ITF-6, ITF-14, Interleaved 2 of 5, Industrial 2 of 5, Standard 2 of 5, Matrix 2 of 5, GS1 Databar (RSS-Expand, RSS-Limited, RSS-14), Code 39, Code 11, MSI-Plessey, Plessey
Scan Mode	Sense mode, Continuous mode
Resolution	10 mil
Light Source	White LED
Scan Window	52mm*69mm
PCS	≥30%
FOV	Diagonal: 68°, Horizontal: 42°, Vertical: 54°
Ambient Light	0 ~ 100,000 LUX
Power Consumption	1W (max.)
Power Adapter	Output: DC5V, 0.5A, Input: AC100~240V, 50~60Hz
Notification	Beep and LED indicator
Dimensions	127.3mm(L) X 111.5mm (W) X 94mm(H)
Weight	300g
Operating Temperature	-10°C to + 50°C
Storage Temperature	-20°C to + 60°C
Humidity	5% - 95% (non-condensing)
Certification	FCC Part15 Class B, CE EMC Class B

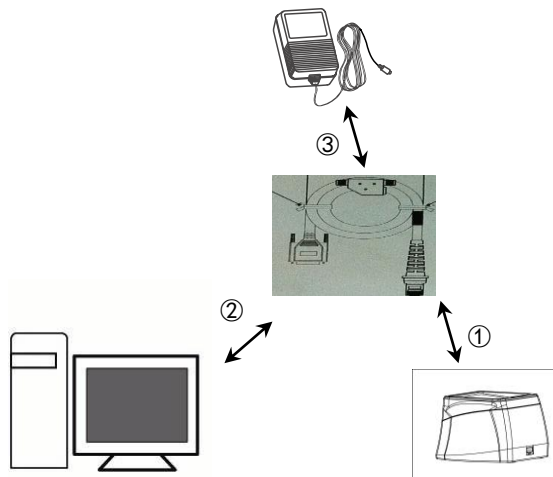

Chapter 6 FR20 Scanner

Chapter 7 Wiring

1. If your scanner is equipped with an RS-232 interface:

- 1) Plug the supplied cable's RJ45 connector into the data port on the scanner.
- 2) Plug the cable's RS-232 connector into the RS-232 port on PC.
- 3) Plug the power adapter into the cable's power jack.

4) Connect the power adapter to a power outlet. After 0.5s the scanner will be powered on (indicator: beep and red LED) and then automatically enter standby mode.

2. If your scanner is equipped with a USB interface:

- 1) Plug the supplied cable's RJ45 connector into the data port on the scanner.
- 2) Plug the cable's USB connector into the USB port on PC.

3) After 0.5s the scanner will be powered on (indicator: beep and red LED) and then automatically enter standby mode.

Chapter 8 Scanning Instructions

Reading a Digital Barcode off Mobile Phone

1. Place the mobile phone screen as close as possible to the scan window and present the barcode to the center of the window.
2. For a successful read, the scanner will beep with its LED turning from red to green. After sending the data to the host, it will enter standby mode.

Reading a Barcode Printed on Paper

1. Place the paper as close as possible to the scan window and present the barcode to the center of the window.
2. For a successful read, the scanner will beep with its LED turning from red to green. After sending the data to the host, it will enter standby mode.

Chapter 9 System Settings

Illumination

Always ON: Illumination LED keeps ON after the scanner is powered on.

Normal: Illumination LED is turned on when the scanner is reading barcode.

OFF: Illumination LED is OFF all the time.

120ms

Scan Mode

Sense Mode

The scanner activates a decode session every time when it detects a change in ambient illumination and meets the requirement of the image stabilization timeout. Decode session continues until barcode is decoded or the decode session timeout expires.

Moreover, a trigger pull can also activate a decode session.

**** Sense Mode**

Decode Session Timeout: This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 0.1s increments from 0.1s to 25.5s. If it is set to 0, the decode session timeout is infinite.

Image Stabilization Timeout: The scanner waits for the image stabilization timeout to expire before activating a decode session every time it detects a change in ambient illumination. This parameter is programmable in 0.1s increments from 0.0s to 25.5s.

Decode Session Timeout

Image Stabilization Timeout

Example: Set the Image Stabilization Timeout to 5s

1. Scan the **Image Stabilization Timeout** barcode.
2. Scan the numeric barcodes "5" and "0".
3. Scan the **Save** barcode.

Sensitivity: This parameter specifies the degree of acuteness of the scanner’s response to changes in ambient illumination. The higher the sensitivity, the lower requirement in illumination change to trigger the scanner. You can select an appropriate degree of sensitivity that fits the ambient environment.

WFF0305
High Sensitivity

WFF0310
** Medium Sensitivity

WFF0330
Low Sensitivity

M00031A
Custom Sensitivity

Sensitivity levels range from 0 to 255. The smaller the number, the higher the sensitivity.

Example: Set the sensitivity level to 10

1. Scan the **Custom Sensitivity** barcode.
2. Scan the numeric barcodes “1” and “0”.
3. Scan the **Save** barcode.

Continuous Mode

When enabled, the scanner activates decode sessions at user-specified intervals, i.e. the timeout between decodes. Each decode session lasts until barcode is decoded or the decode session timeout expires. To suspend/resume the operation, simply press the trigger.

W030002

Continuous Mode

Decode Session Timeout: This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 0.1s increments from 0.1s to 25.5s. If it is set to 0, the decode session timeout is infinite.

M00031D

Decode Session Timeout

Example: Set the Decode Session Timeout to 5s

1. Scan the **Decode Session Timeout** barcode.
2. Scan the numeric barcodes “5” and “0”.
3. Scan the **Save** barcode.

Timeout between Decodes: When a decode session ends, next session will not happen until the timeout between decodes expires. It is programmable in 0.1s increments from 0s to 25.5s.

M00031C

Timeout between Decodes

Example: Set the Timeout between Decodes to 5s

1. Scan the **Timeout between Decodes** barcode.
2. Scan the numeric barcodes “5” and “0”.
3. Scan the **Save** barcode.

Factory Defaults

Scanning the following barcode can restore the scanner to the factory defaults.

You may need to reset your scanner when:

1. scanner is not properly configured so that it fails to decode barcodes;
2. you forget previous configuration and want to avoid its impact;
3. functions that are rarely used have been enabled for the time being.

WFFD980

Restore All Factory Defaults

Digit Barcodes

After scanning numeric barcode(s), you need to scan the **Save** barcode to save the data.

A

B

C

D

E

F

Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel the Last Digit** barcode and then the correct digit, or scan the **Cancel All Digits** barcode and then the digits you want.

For instance, after reading the **Decode Session Timeout** barcode and numeric barcodes “1”, “2” and “3”, you scan:

Cancel the Last Digit: The last digit “3” will be removed.

Cancel All Digits: All digits “123” will be removed.

D 0 0 0 0 1 2

Save

D 0 0 0 0 1 0

Cancel the Last Digit

D 0 0 0 0 1 1

Cancel All Digits

Chapter 10 RS-232 Interface

When the scanner is connected to a host device through its RS-232 interface, serial communication is enabled by default. However, to ensure smooth communication and accuracy of data, you need to set the scanner's communication parameters (including baud rate) to match the host's settings. The default settings of the scanner are 9600bps, no parity check, 8 data bits and 1 stop bit.

WFFD9D3

**** Baud Rate 9600**

Chapter 11 USB Interface

When the scanner is connected to a host device through its USB interface, **USB HID-KBW** is enabled by default. You may switch to **HID-POS** or **USB COM Port Emulation** by scanning the appropriate barcode below.

HID-POS

W030D03

HID-POS

USB COM Port Emulation

W030D02

USB COM Port Emulation

USB HID-KBW

W030D01

**** USB HID-KBW**

Three methods of input are provided for USB HID-KBW: Standard Keyboard, Function Key Mapping, Emulate ALT+Keypad.

Standard Keyboard

**** Standard Keyboard**

Function Key Mapping

When **Function Key Mapping** is enabled, function character (0x00 - 0x1F) are sent as ASCII sequences over the numeric keypad.

1. CTRL Make
2. Press function key (Refer to the **ASCII Function Key Mapping Table** on the following page)
3. CTRL Break

Function Key Mapping

ASCII Function Key Mapping Table

ASCII(HEX)	Function key	ASCII(HEX)	Function key
00	2	10	P
01	A	11	Q
02	B	12	R
03	C	13	S
04	D	14	T
05	E	15	U
06	F	16	V

Chapter 12 Symbologies

Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides programming barcodes for configuring the scanner so that it can identify various barcode symbologies. It is recommended to disable those that are rarely used to increase the efficiency of the scanner.

Global Settings

Disable All Symbologies

If all symbologies are disabled, the scanner can only identify programming barcodes.

Disable Interleaved 2 of 5

Check Digit Verification

A check digit is optional for Interleaved 2 of 5 and can be added as the last digit. It is a calculated value used to verify the integrity of the data.

Disable: The scanner transmits Interleaved 2 of 5 barcodes as is.

Do Not Transmit Check Digit after Verification: The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.

Transmit Check Digit after Verification: The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

Chapter 14 Troubleshooting

Problem	Solution
Does not respond to input.	Disconnect the power adapter and then reconnect it.
Scanned data is not displayed on the host.	Ensure the scanner's communication parameters (such as baud rate, interface) match the host's settings.
Cannot read barcodes.	<ol style="list-style-type: none">1. Follow the scanning instructions in this manual to scan barcode.2. Ensure the barcode type is enabled.3. Ensure the barcode is not defaced. Wrinkled, soiled or torn barcodes might be unreadable.
